

Software Assessments Microsoft Dynamics

Quick scan - Assessment Aspects

The **quick scan** is an assessment that offers the opportunity to **assess** the **Dynamics 365 environment** and make **recommendations** for improvement and optimization.

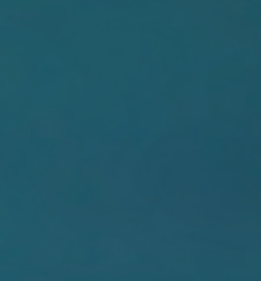

General Architecture and Configuration
The general layout, the modules used and how they are configured.

Customization and Adjustments
The degree of customization within Dynamics 365 any custom code, configurations, and extensions that have been added.

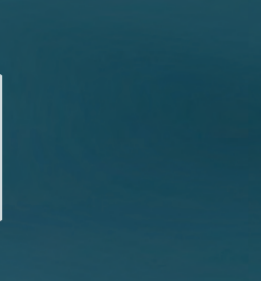

Data quality and management
The integrity of the data, duplicates, incomplete data and their relevance to the business processes.

Security settings
User rights, access control and any compliance with industry standards.

Performance and Scalability
System performance, load times, processing speed and scalability to meet growing demands.

Integrations and Connectivity
Integrations with other systems or apps, their reliability and efficiency.

User Adoption and Training
How users use the platform and whether there is a need for additional training or support.

Dynamics 365 assessment
